Next Level Training for Law Enforcement: Unleash the Power of Team Base Training in Virtual Reality

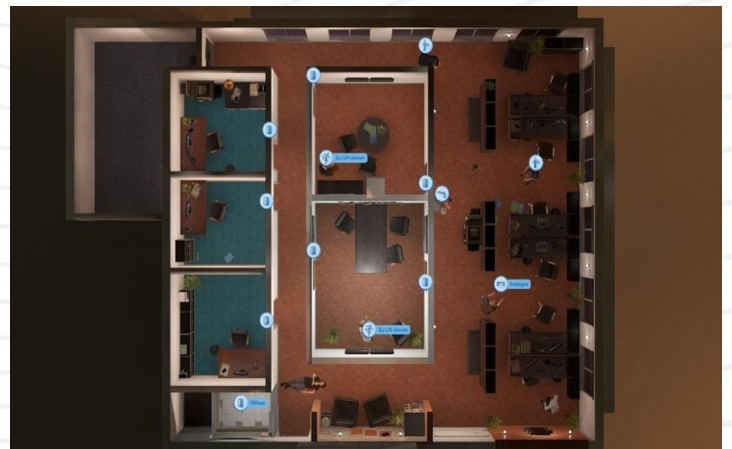

This cutting-edge solution is designed to empower law enforcement officers, military and special forces personnel, preparing them for high-stakes situations. Leveraging state-of-the-art virtual reality technology, these professionals can significantly enhance their responsiveness in stressful scenarios, leading to unparalleled safety and performance in real-world situations. Experience high-pressure situations in a controlled environment and achieve unmatched proficiency and effectiveness. This isn't your everyday portable VR gaming system; it's a game-changer that improves performance and saves lives.

Immersive training with Refense system

In high-risk environments, every decision counts. Responsiveness can mean the difference between life and death. Traditional training methods fall short in preparing professionals for these high-pressure situations. Enter Refense's VR training system, a solution that revolutionizes the way we train. This complete training simulation solution eliminates the need for time consuming and resource-intensive preparation, reducing the risk of injury. By combining top-tier virtual reality equipment with innovative training software, we create an immersive training experience that's in a league of its own.

Training Modules:

- Active Shooter Training
- Search and Seizure
- Suicide Prevention
- Hostage Situations
- Life-Threatening Situations
- Counter Terrorism Training
- Negotiation
- Conflict De-Escalation
- Domestic Violence
- Stress Management
- Unclear Situations
- Management of Intoxicated or Mentally Ill Persons

The Most Sophisticated VR Platform for Training

The Refense VR system is designed as a modular training simulation platform, consisting of three major elements:

- The training field: an installation at your training facility in a room starting at around 11x11 meters for 2-5 participants.
- The VR gear: participants wear tracking sensors on their hands and feet, in addition to a VR headset, allowing teams of up to 16 participants to simultaneously enter a training scenario.
- The instructor panel: instructors can direct and record training scenarios. All movements and communication are recorded for analysis and feedback during an effective After Action Review.

About Refense and J&F Alliance Group

Refense is a Swiss company that enables VR training for police, first responders and military personnel world-wide. They have developed a unique VR platform that has been designed with a modular expansion framework to meet the evolving training needs of military and law enforcement clients. Since mid-2023, Refense and the J&F Alliance Group have been working together on a US-oriented version of the Refense VR training system to meet the specific requirements of US authorities. Discover the potential of virtual reality training systems today and make an appointment with your contact at the J&F Alliance Group.
